

Digital security surveillance solutions specifically designed for managing multiple systems from a remote location.

Central Management Station

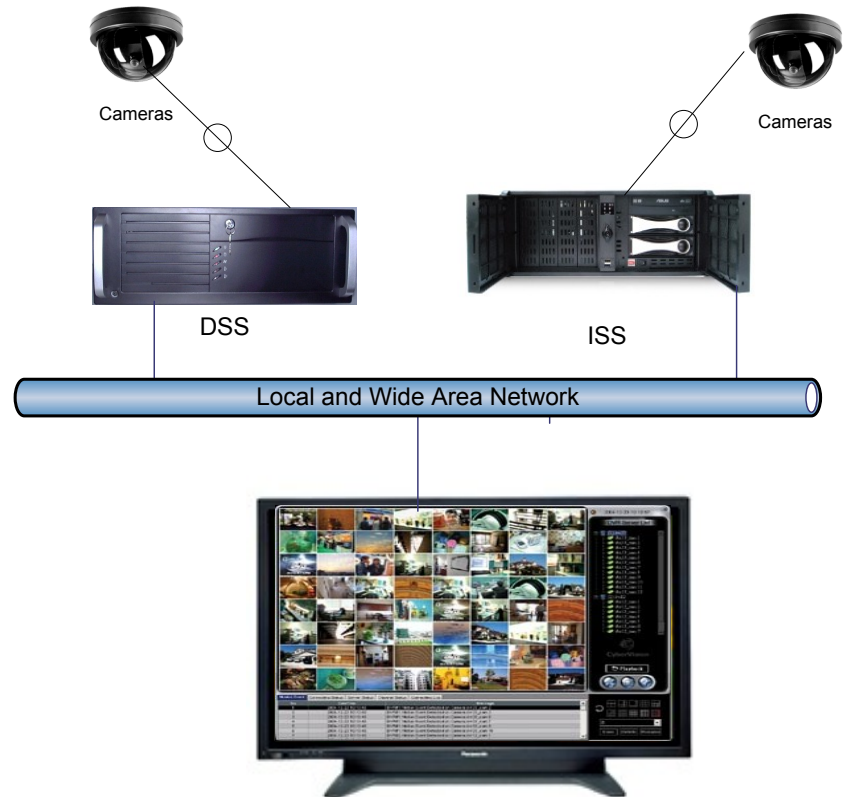

Remote Surveillance, Management and Control Solution

Centralizing Security Surveillance

LAB Central Management Station (CMS) allows you to manage multiple LAB surveillance systems from a remote location. Manage up to 64 systems with up to 1024 channels allowing remote viewing of cameras, recorded video and controlling systems settings from one station.

Information from motion detector sensors, door sensors, barometric pressure sensors, moisture sensors and any other low-voltage sensors or alarm system connected to your surveillance system is reported back to the CMS.

The CMS delivers a remote network-based centralized monitoring platform for administrators.

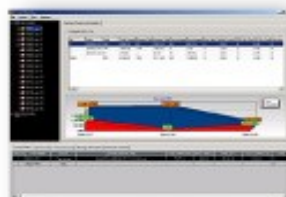

Features

- Integrating LAB DVRs on one screen (Max. 64 DVRs with 1024 Channels)
- Multiple Split view
- Hierarchy E-MAP view
- TV-Wall and Motion to Zoom
- Remote PTZ Control, Backup and Setup
- Event Log System
- Online Playback and Download
- DVR Alarm Pop-up
- Audio Alarm (Motion, Network, Disconnect, DI/DO)
- Account Management
- Support Multiple Screen Display (Max. 16)
